EDUCATION

M.S. in Information Management

University of Illinois Urbana Champaign, IL, USA

Aug 2025 - May 2027

GPA: 4.0/4.0

B.E. in Electronics and Telecommunication

University of Mumbai, MH, India

Aug 2019 - May 2023

GPA: 3.73/4.0

SKILLS AND CERTIFICATIONS

Programming Languages:	Python, SQL, Pyspark, R, HTML5, CSS3, JavaScript
Data & Analytics:	NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, Pytorch, ETL, Statistical Analysis, A/B Testing
Databases/Operating Systems :	Databricks, BigQuery, MongoDB, AWS, MySQL, Azure SQL, ADF, Snowflake, DBT, Postgres
Tools and Technologies:	Power BI, Tableau, Salesforce, Excel, GitHub, Dbeaver, WinSCP, Putty, Jupyter NB, API
Business & Analysis Skills:	Requirements Gathering, KPI Development & Tracking, Process Mapping, Data Mining, Data Storytelling, Data Modelling, Data Cleaning, Prompt Engineering, Generative AI

WORK EXPERIENCE

Finance Data Engineer Intern | Transamerica | Maryland, USA

Jun 2026 – Present

- Migrated legacy MDX/SSAS cube logic to **PostgreSQL** for RILA daily cashflow reporting with no migration playbook, assembling portfolio-specific logic across **14** insurance portfolios and **100K+** records to reflect daily behavioural changes.
- Designed a Power BI cash flow dashboard from scratch, including a hierarchical matrix visual now used for daily team reporting, improving reporting accuracy from **42% to 100%**.
- Redesigned the underlying query logic replacing a basic structure with an optimized version, improving refresh speed by **34%**.

Data Engineer | Education Justice Project (EJP) | Illinois, USA

Apr 2026 – Present

- Automated **Salesforce** data migration across **4** object types via **REST API** using Python, replacing manual imports with a single-command workflow enforcing business-logic and cutting per-term ingestion time by **~80%**.
- Architected a Python ETL pipeline ingesting data from **9 REST APIs** into **BigQuery**, eliminating manual exports and powering real time **Tableau** dashboards tracking engagement for **10k+** students across **150+ facilities** in **20+ US states**.

Accenture Solutions PVT LTD | Mumbai, India

Data Engineering and Governance Analyst | Client - Mondelez International (RDQ Global)

Sep 2024 – Jun 2025

- Developed a reusable data migration template to transfer **20M+** records from Big Query to Azure Databricks along with additional functionalities like **Delta Load**, **Schema Drift**, and **SCD Type 2** support, reducing workflow runtime by **89%**.
- Devised and optimized Databricks Workflows with efficient cluster configurations, reducing cloud compute costs by **15%**.
- Managed end-to-end pipeline configurations on Github for **5** projects, ensuring CI/CD.
- Led client sessions for requirement gathering and knowledge transfer ensuring alignment with business requirements.

Data Engineering and Governance Associate | Client - Mondelez International (RDQ Global)

Jul 2023 – Aug 2024

- Developed **Python** script integrations with Dataverse, SharePoint, and ADLS, optimizing Databricks ingestion with quality checks for **200+** files and **20k+** records, reducing preprocessing time by **60%**.
- Integrated **email alerts** into Python scripts to notify stakeholders of rejected files, reducing manual data validation time by **30%**.
- Streamlined data collection across **10+** schemas using **PySpark** stored procedures and **dynamic SQL** logic in **Azure Databricks** and **BigQuery**, enabling real-time dashboards and eliminating **100%** of manual effort.

PROJECTS

Airbnb Data Processing using dbt on Snowflake ([Github](#))

May 2026 - Jul 2026

- Architected a 3-tier medallion data pipeline (bronze/silver/gold) using **dbt** on **Snowflake**, transforming **3** raw source tables into **11** modular SQL models, consolidating fact and dimension data into a single **OB**T for downstream BI queries.
- Implemented SCD Type-2 change tracking via **3** dbt snapshots using timestamp-based strategies, preserving full historical lineage for point-in-time analysis without manual versioning logic.
- Reduced pipeline maintenance overhead by building **4** reusable dbt **macros** and incremental materialization on high-churn models, enforcing automated source-level data quality tests.

Lifestyle & Fitness Analytics Platform ([Github](#))

Aug 2025 – Dec 2025

- Orchestrated automated ETL pipelines using Databricks Workflows and PySpark to process and transform **40K+** lifestyle records, delivering analytics-ready datasets for BI consumption
- Designed 4-page interactive Power BI dashboards tracking **10+KPI's** across diets, workout type and demographics enabling data driven identification of high performing nutrients.
- Engineered advanced DAX measures and drill-down functionality, reducing manual analysis time by **40%** across **5+** diets.

CERTIFICATIONS AND ACHIEVEMENTS

- Microsoft Certified Azure Fundamentals (**AZ-900**).
- Elected to be the **Campus Ambassador** for the iSchool at UIUC.
- Achieved **merit recognition** in Accenture's Techgenics Stream training (**Oracle PL/SQL**) in India region.
- Ranked amongst the **Top 20 teams** in **Hackathon** organized by AWS, Databricks, Synchrony and UIUC.
